Coloring on Your iPad

Islamic Star Geometry · iPad Edition

In GoodNotes or Notability

Open the PDF and tap any thumbnail in the index to jump straight to a design. Color directly on top of the numbered facets with any brush — the line art and numbers stay crisp underneath. Duplicate a page to color it again.

In Procreate

Import a transparent PNG from the ZIP. Add a new layer BELOW the line art and paint there, so the black outlines and numbers always stay on top. Load IslamicGeometry.swatches for a ready-made palette (30 colors).

Tips

- Use the color-fill / ColorDrop tool to flood whole numbered facets.
- Match each number to the legend bar at the bottom of the page.
- Everything is reusable forever — color each design as often as you like.
