Coloring on Your iPad

Sacred Geometry · iPad Edition

No printer, no mess · just you, your Apple Pencil, and fifty worlds to color.

In GoodNotes or Notability

Open the PDF and begin on the index page. Tap any design to glide straight to it, then color right on the artwork with whichever brush you love. Lift the exact shade you need from the numbered key beneath each piece with the eyedropper.

In Procreate

Drop a transparent PNG onto a fresh canvas. The linework rests on its own layer, so paint on a layer beneath it and every stroke stays effortlessly within the lines. Import the included palette and every number is one tap away.

A gentle note

Each number echoes a shade in the key · follow them for the intended palette, or make the piece entirely your own. Zoom in for the finest facets, and flat-fill or gradient-shade to let each form find its depth. There is no rush here · unwinding is the whole point.
