Coloring on Your iPad

Voronoi Gardens · iPad Edition

No printer, no mess · just you, your Apple Pencil, and the designs.

In GoodNotes or Notability

Open the PDF and tap any thumbnail in the index to jump straight to that design. Colour directly on top of the Voronoi cells with any brush. Each cell is a closed region, so fill them one at a time for a luminous stained-glass effect.

In Procreate

Import a transparent PNG onto a new canvas. The cell outlines sit on their own layer, so paint underneath and every stroke stays within the lines. Load the included 30-colour palette for tones that harmonise across all fifty designs.

A gentle note

A Voronoi cell holds every point closer to its own seed than to any other · the quiet rule behind honeycombs, leaves and cracked earth. No two designs repeat. Colour as slowly as you like.
