3D Color by Number

Interactive · runs in your iPad's Safari browser

What this is

A single interactive app with **8 low-poly 3D figures** (the five Platonic solids, a geodesic sphere, a torus and a faceted gem).

Each face is numbered. Colour the numbers and the figure lights up as a shaded 3-D object.

It runs 100% offline in Safari — no app to install.

Getting started on iPad

1. Download the ZIP from Etsy to your iPad (Files app).

2. Tap the ZIP to unzip it.

3. Tap **MathRelaxing_3D_CBN.html**. If needed, Share > Open in Safari.

How to play

Rotate: drag with one finger. **Zoom:** pinch. **Reset view:** button top-right.

Pick a colour from the palette bar (each is numbered 1–8).

Tap a face showing that number — it fills and the number disappears.

Switch figures from the menu at the top. Progress saves automatically per figure.

Undo / **Clear** are top-right.

Tips

Rotate as you go — numbers only show on faces pointing toward you.

Works on any modern browser (iPhone, Android, Mac, PC) too.

MathRelaxing — For personal use only. Not for redistribution or resale.
